4 Angle Basics

4.1 Types of Turns and Angles

A quarter of a turn clockwise

Half a turn anticlockwise

Three quarters of a turn anticlockwise

A full turn clockwise

Any angle between 0° and 90°

Right Angle

An angle that is exactly 90°

Obtuse Angle

Any angle between 90° and 180°

4.5 Notation and Labelling

Labelling Lengths

Each point (or corner) of a shape is labelled with a letter.

If we are talking about this distance...

We say we are looking for the length of AB

Because it is the distance between the point labelled A and the point labelled B

Labelling Angles

Each point (or corner) of a shape is labelled with a letter

If we are talking about this angle...

We say we are looking for the angle DAB

Because if we draw a line in order from point D to point A to point B, we draw around the angle

Angle Notation

We can label angles in multiple ways:

$\angle ABC$ or \widehat{ABC} or *Angle ABC*

It can help to see these are instructions rather than labels:

“The turn from line AB to line BC”

We don't need to specify direction yet, so:

$$\widehat{ABC} = \widehat{CBA}$$

“The turn from line BC to line AB”

Note: We use capital letter for points.

Worked Example

Write down the values of:

$$\angle ABD =$$

$$\angle DBC =$$

$$\angle ABC =$$

Your Turn

Write down the values of:

$$\angle ABD =$$

$$\angle DBC =$$
