- Candidates must score 65% or more to pass a test on a training course. Naz is awarded 51 out of 75 possible marks. Has Naz passed the test?
- Selena asked some pupils at her school whether or not they liked the uniform. 52 out of 80 boys said they liked the uniform. 43 out of 60 girls said they liked the uniform. Use percentages to help you decide whether boys or girls liked the uniform more.

- John believes that at least 35% of his students will choose to study Maths at University. The choices of his students are shown in the table.

Subject	No. Chosen
Medicine	8
Maths	15
Engineering	9
Other	6

- Is John correct?
- What percentage of his students chose medicine?

- Over the course of twenty minutes, 72 vehicles passed over a bridge. 47 of the vehicles were cars and 16 were vans. What percentage of the vehicles were neither cars nor vans.

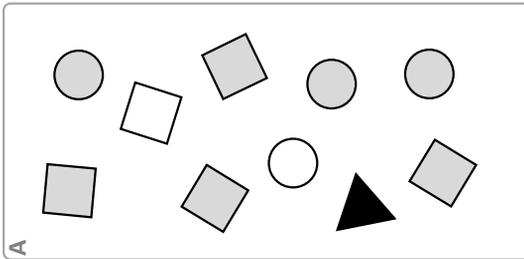

- Some children were surveyed to find out whether they were left- or right-handed. The two-way table shows the results.

	Left-handed	Right-handed
Male	18	175
Female	17	139

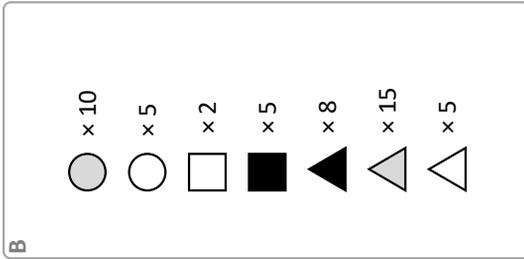

- What percentage of males were left-handed?
- What percentage of females were left-handed?
- What percentage of all the children were left-handed?

Problem Solving

different ways (a/b as a percentage)

- (1) use each of the six digits 0, 1, 2, 3, 5, and 6 to make the statement true:

$$\frac{\square\square}{\square\square} = \square\square\%$$

the numbers $\square\square$ are 2-digit numbers, like 65

try to find 8 different solutions
(there are also others if you ease the restriction of having 2 – digit numbers)

- (2) use each of the six digits 3, 4, 5, 6, 7, and 8 to make the statement true:

$$\frac{\square\square}{\square\square} = \square\square\%$$

the numbers $\square\square$ are 2-digit numbers, like 84

try to find 4 different solutions

- (3) use any four *different* digits in the fraction to make the percentage equivalent as big as possible but less than 100%

$$\frac{\square\square}{\square\square} = \bigcirc\%$$

the numbers $\square\square$ are 2-digit numbers, like 28

what different numbers would you pick to make the percentage equivalent as small as possible?
